

Lighting the way for a unique fan experience

ANP Lighting developed a lighting solution as unique as the fan experience in SunTrust Park, the new home of the Atlanta Braves. From paths and walkways to retail entertainment and residential areas, ANP Lighting provided a complete LED solution for consistent lighting across the complex.

All outdoor lighting was designed to meet Georgia Power's specifications and performance criteria. ANP luminaires, which included DALI (Digital Addressable Lighting Interface Technology), provided excellent lighting coverage, uniformity, and wider pole spacing. Many of the steel poles incorporated banner arms - to display team and event pennants - that were designed to meet high wind rating requirements.

Custom lighting solutions for the retail areas of the park included RLM fixtures to light walls, murals, building entrances, and sidewalks.
