

Bringing a vibrant neighborhood to light

The revitalized Mariposa District in Denver is a green urban neighborhood of apartments, townhomes and flats. The area is known for its diversity of residents, the rich cultural asset of the Santa Fe Arts District and the vibrant spirit, “La Alma” of the community. The Denver Housing Authority wanted the streetscape and pedestrian lighting to match the modern, inviting feel of this revitalized community.

ANP Lighting was selected to bring the design concept to light. A sleek Bella Vista shade was selected to complement the urban environment. Because sustainability was core to the overall project concept, each fixture included an energy-efficient 46w ANP HighPro™ LED platform with crisp 4000K color for bright, even lighting. The arching arm incorporated a custom-designed medallion with the project name and logo.

The fixtures beautifully complement the original works of art throughout the neighborhood. ANP Lighting product will be used in all six phases of the development.

ANP Lighting custom design and engineering capabilities create unique lighting solutions.
